## MARMORINO

Also available in our range of applied render surfaces is the traditional Marmorino finish. With the traditional look of the Italian fresco, Marmorino can be applied using various techniques such as Encausto, Intanachino and Travertine.

The utilisation of these traditional techniques can produce a wide range of surfaces, from a highly polished glass-like sheen to the heavy, organic and grainy texture of raw cement.

Our Marmorino is a completely natural product, ideal for heritage or eco projects yet equally amenable to the modern colour palates of contemporary design.

We can apply Marmorino in many different ways from the traditional MarmoVita to the polished cement finish found in many contemporary interiors.
